Immediate-neighbor Ising Petz circuit: size and temperature
Threshold 100; alpha 0.001; initial |+x>; 65,536 independent population trajectories
End-to-end correlation; dashed = exact Gibbs
Distance of correlations from Gibbs
Segmentation with simultaneous sign bounds
K = 0.8
$-\Gamma_{\mathrm{seed,\,last}}$
$\max_{s,p} |\hat{\Gamma}_{sp} - \Gamma^{\mathrm{Gibbs}}_{sp}|$
Correct and resolved fraction
2 x 4
2 x 8
2 x 16
2 x 32
2 x 64
Local-bath sweeps
K = 1.2
$-\Gamma_{\mathrm{seed,\,last}}$
$\max_{s,p} |\hat{\Gamma}_{sp} - \Gamma^{\mathrm{Gibbs}}_{sp}|$
Correct and resolved fraction
Local-bath sweeps
