Isolated-bond diagnostic: staggered thresholds move the effective boundary
Illustrative fixed thresholds (25,75,125), alpha = 0.01, equal axis amplitudes
Three distinct interaction thresholds
Coupling J
Neighbor intensity difference d
Jx
Jy
Jz
One alignment sign crossing at each temperature
Raw alignment <XX+YY+ZZ>
Neighbor intensity difference d
b = 0.5
b = 2
b = 8
High-temperature limit: 75
Zero-temperature crossing limit: 100
